Inland Bays Hazardous Debris Identification Datasheet

Use this datasheet when locating hazardous debris in the Delaware Inland Bays. Hazardous debris such as abandoned pilings, wooden structures such as abandoned docks or duck blinds, tree stumps, and/or any other debris that impedes boater travel and safety.

GPS coordinates of the debris would be very helpful, what the tide is doing, along with a picture, and a general area of where it is.

Notes such as "only visible at low tide or approx 100 yards from shore" would also be helpful.

GPS COORDINATES	TIDE	Specific Location and Bay	PICTURE Yes or No	NOTES (what it actually is/looks like and the hazard it demonstrates, tidal info..etc)
